

Powder Scrub

A special blend of wetting agents, natural degreaser and borax make this hand-soap an effective cleaner. This tough grease cutting formula will remove the most persistent dirt and grime without harming hands. It is completely water soluble and will not plug drains.

This product is particularly well suited for use in heavy industrial applications. It is economical and feeds well through the dispensers found in shower and change rooms in steel plants, foundries, machine shops, pressrooms, mines, etc.

DIRECTIONS: This hand-soap can be fed through most powder hand-soap dispensers. If dispensers are not available, pour hand-soap into a clean dry can or bowl and place near sink. Place a moderate amount of powdered hand-soap in the palm of the hand, slowly add warm water. Scrub hands, rinse and dry.
